

WHITEPAPER

Introduction about Gleaminvest

Our business that generates and sells clean, renewable energy sources such as solar, wind, hydroelectric, and geothermal power. These companies typically aim to reduce reliance on fossil fuels and decrease greenhouse gas emissions, in order to promote a more sustainable and environmentally-friendly energy system. There are many different types of green energy companies, ranging from small, independent businesses to large multinational corporations. Some focus on a specific type of renewable energy, while others offer a range of clean energy solutions. Many green energy companies also engage in research and development in order to advance the technology and efficiency of renewable energy sources. In addition to producing and selling clean energy, many green energy companies also work to educate the public about the benefits of renewable energy and advocate for policies that support the adoption of clean energy technologies.

Who are we and what's our target

As a Gleaminvest worlds leading and most innovative company we are;

1. Invest in clean and renewable energy sources: As a green energy company, your primary focus is on investing in and developing clean and renewable energy sources such as solar and wind power. This involves identifying and securing funding for projects, installing and maintaining the necessary infrastructure, and selling the resulting energy to consumers.
2. Share profits with investors and charities: As a front-line investment company, you share the profits generated from your clean energy projects with your investments. You also donate a portion of your profits to charities, helping to fund important causes and make a positive impact on the world.
3. Diversify investments: In addition to investing in clean energy, we also diversify your investments by placing funds in other natural resources such as gold, silver, oil, and platinum. This helps to ensure that your profits are stable and sustainable over the long term.
4. Expand your mission: With the funds received from our clients and the profits generated from our clean energy projects, you work to expand your mission of promoting a cleaner and more sustainable world. This may involve developing new projects, increasing your impact, or supporting initiatives that align with your values.

Our Goals in 2023

- **Q1 :**
 - 1- Engage with 500 realtime investors.
 - 2- Building 1 MWh solar panel farm.
 - 3- Reducing carbon footprint by %1 around farming sites.
 - 4-Start investments and searching farming areas for hydroenergy and geoenergy facilities.
 - 5-EPC services in first 10 countires.
 - 6- Charity donations and sending first quarterly balance report to our investors.
- **Q2:**
 - 1- EPC integration for individual users (solar panel)
 - 2-Designing new panel systems for individual users ,farms, apt etc.
 - 3-Starting manufacturing own panels ,batteries and accessories .
 - 4- Designing 1000 gas station in order to power with solar and car charging lots.
 - 5- Starting Gleaminvest forests foundation
 - 6-Sending 2nd quarterly balance report to our investors.
- **Q3:**
 - 1-Publishing our token.
 - 2-Expanding solar deployment opportunities.
 - 3- Min in 4 counties building gleaminvest forests
 - 4-Investing in non toxic mining
 - 5-Integration commodities income with solar income for a stable earning for investors.
 - 6-Sending 3rd quarterly balance report to our investors.
- **Q4 :**
 - 1-Launching our own credit and debit card .
 - 2-For decentralising managing token and currencies integration.
 - 3-Mastercard partnership for cards.
 - 4-Donations for charities for 1 year completion.
 - 5 Reaching 2000 stations workin with solar power.
 - 6-Sending anual report for our investors.
